# Premium Efficiency LV AC Flame Proof Motors IE2 / IE3 Efficiency Class

We put all our energy into saving yours !

# Save today, for better tomorrow.

Out of total electricity generated worldwide, it is estimated that between 30 to 40 % is consumed by industrial electric motors. Given the global concern about diminishing resources, and recent high prices for energy, it is no wonder that there is increasing interest in the energy efficiency of electric motors. Of course the electric motor is only one element in a motor-driven system that offers the potential for savings, but it has been estimated that optimizing motor-driven systems could deliver overall savings of between 30 and 60 per cent.

Apex series, IE3 premium efficiency LV motors, is another green initiative by CG to save energy.

“Saving 1 kWh of electricity produced from a thermal power station saves average 0.82kg of CO<sub>2</sub> emission to the atmosphere”.

IT'S JUST NOT A BRAND,  
IT'S A SYMBOL OF ENERGY SAVINGS

## Crompton Greaves

CG is a pioneer in the management and application of electrical energy. With more than 15,000 employees across its operations around 85 countries, CG provides electrical products, systems and services for utilities, power generation, industries, and consumers. The company is organized into four business groups: Power, Industrial, Automation, and Consumer, with a revenue of US\$ 2.3 billion from product lines that cover the entire value chain of engineering offerings.

CG is engaged in design, manufacturing and marketing of electric motors for last 75 years. Our products are used in almost every industrial application including manufacturing, petrochemicals, food processing, pharmaceuticals where they drive fans, pumps, compressors, conveyors, lifts and cranes. Our core competencies lie in our design facility conforming to the international quality standards. We make continuous effort to bring out the latest, most advanced products into market-place. We continuously add many new services, features and introduce new solutions so as to ensure complete customer satisfaction.

## Quality assurance

Stringent quality procedure is observed from first design to finish product in accordance with international quality systems. All of our manufacturing facilities have accreditation with ISO 9001 OHSAS 18001 & ISO 14001 been assessed to meet these requirements, a further assurance that only the highest possible standards of quality are accepted.

## CG flame proof motors

CG has the widest manufacturing range of low voltage motors suitable for hazardous area. These motors are designed to suit the ignitable atmospheres present in hazardous locations such as Zone 1, Zone 2. Motors are suitable for various temperature classes & gas groups.

We have technical and design expertise in this very specialized market and are able to ensure the correct selection of motors for any application taking into account of two most important factors to be considered safety and compliance to various statutory norms of various countries.

CG flame proof motors are designed, tested and manufactured in accordance with latest national and international standards, following are the salient features offered:

## Salient features

- Rugged cast iron construction
- Low vibration and noise
- Excellent aesthetics
- Motors are with metallic fan
- Specially designed cooling fins for better heat dissipation
- Rigid foot construction for low vibration
- IP66 protection
- Bigger terminal box for proper termination of cables

## Optional features

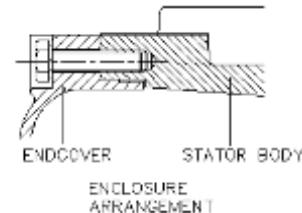

- Suitable for operation with VFD\*
- Motors can be offered with plug and socket
- Specially designed terminal box to accommodate 3 nos of auxiliary boxes
- Encoder and external fan arrangement
- Mild steel enclosure can also be offered as per request
- temperature range -20 deg. To 60 deg.
- Special slip ring flame proof motors for mine application
- Special mine ventilation flame proof motors

## Construction

Crompton Greaves flame proof motors are made up of High quality cast iron construction, ribbed externally to ensure maximum heat dissipation. All components are machined on CNC machines ensuring concentricity and correct alignment. The windings and working parts are completely enclosed and air is forced over the stator body by fan, mounted on the shaft and protected by a cowl. The feet are integrally cast with the body. This ensures sturdiness and resistance to vibrations. Explosion-proof Ex'd-A type of protection that utilizes an enclosure that is capable of withstanding an explosive gas or vapor within it and/or preventing the ignition of an explosive gas or vapor that may surround it and that operates at such an external temperature that a surrounding explosive gas or vapor will not be ignited thereby.

## Stator and rotor cores

Both the stator and rotor cores consist of low loss and high permeability steel stampings which are assembled under pressure and rigidly secured by end plates.

## Terminal Box

Terminal box is provided with IP55 degree of protection. The box can be turned through 360 in steps of 90 to give cable entry from any one of four positions

Following are the additional features:

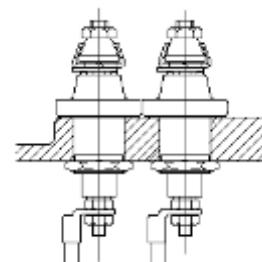

- High grade cast iron construction capable of containing internal explosion
- Specially designed for accommodating bigger cables and proper termination
- Double decker terminal arrangement for easy termination of two cables
- Anti loosening terminal arrangement

For slip ring motors, separate terminal box for stator & rotor terminations provided. Stator terminal box is on left hand side while rotor terminal box is on right hand side viewed from driving end.

## Terminal Stud

Terminal stud for CG flame proof motors comes up with following features:

- Fully non hygroscopic thermosetting moulded glass filled compound.
- Increased clearances & creepages.
- Anti loosening arrangement.
- Metallic bush insert to take tightening pressure. Eliminates breakage of insulation (E160-315LX frames)

## Insulation system

Crompton Greaves flame proof motors are designed and manufactured with carefully selected and tested insulating materials to ensure long services. The life of the motor mostly depends upon the life of the insulating materials since bearings, brush gears, slip rings etc. can be replaced easily during normal maintenance.

Motors are provided with class F insulation with temperature rise limited to class B, gel coat is provided on overhang as additional protection against ingress of moisture.

## Winding

Stator winding (and rotor winding in case of slip ring motors) consists of enameled copper wire impregnated with superior quality class F varnish which is rigid at all working temperatures.

Stators in motors with frame 280 & above are manufactured with vacuum pressure impregnation process as a standard. All rotors irrespective of frame size are processed with vacuum pressure impregnation. This gives added electrical & mechanical strength to the winding for high number of starts. The varnish has a high insulation resistance and excellent resistance to moisture, saline atmosphere, acidic / alkaline fumes, and also to oil and grease. The insulation gives complete reliability under all atmospheric conditions, including humid tropical climates. Stator and rotor wound packs are subjected to surge test before impregnation.

Reasons to buy Apex series...

## LOW OPERATING COST

APEX series IE3 motors are complying with new efficiency requirement of IEC60034-30:2008 with lowest payback and low operating cost.

## LOW VIBRATION

IEC Standard? We set our own standard for vibration much lower than IEC 60034-14.

Rotors are dynamically balanced to G 2.5 class at rated speed ensuring low vibration level.

### VIBRATION LOWER THAN IEC

Frames	IEC60034-14	CGL
63 - 132	1.6	0.4-1.2
160-280	2.2	1.1-1.8
280 & Above	2.8	1.8-2.0

mm / Sec.

Balancing Machine

## SUPERIOR AESTHETICS

APEX series motors are having superior aesthetics, with RAL 5021 standard paint shade. We can provide various paint shade and painting scheme according to project requirement including C3M, C4M, & C5M.

Frames (cast iron range) are constructed using high grade FG250 cast iron, ribbed externally to ensure maximum heat dissipation.

Apex series motor is fitted with terminal box and gives IP55 degree of protection. The box can be rotated through 360 degree in steps of 90 degree to give cable entry from any of four positions. Terminal box is designed to provide more space for proper termination of cables inside terminal box.

## ENGINEERED TO APPLICATION

Apex series motors can be offered with add on accessories like anti condensation heaters, insulated bearings, encoder mounting arrangements etc.

CG Apex series motors are 100% in house manufactured from its own stamping, diecast and winding centers.

## STATE OF THE ART TESTING FACILITY

IEC has adopted testing procedure from CSA, IEEE 112-method B i.e measurement of efficiency by actual stray load losses calculation.

It is well known that induction motor testing standards vary significantly in their defined methodologies, instrumentation accuracy, and testing procedures. Sometimes, the efficiency value for the same motor can differ by 5% with different standards. Even though the same standard is used in experimental tests, the machine efficiency can still vary by more than 2 % when performed in different testing sites.

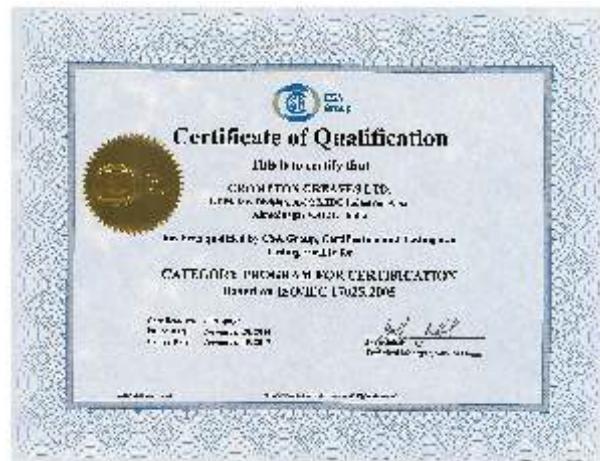

So it becomes important to keep regular check on instrumentation accuracy and testing procedure to ensure guaranteed efficiency.

Our 7 test labs with 0.2 class instrumentation and torque transducers are approved by CSA for accuracy and testing procedure under CPC programme.

In order to qualify for the CPC program, you will need to obtain a certificate of qualification from CSA Group demonstrating:

- Complete knowledge of all applicable product standards
- The ability to design, manufacture and test products that comply with those standards
- Access to suitable testing facilities

**ONLY MOTOR MANUFACTURER IN INDIA TO

### Classification of explosive atmospheres according to IEC

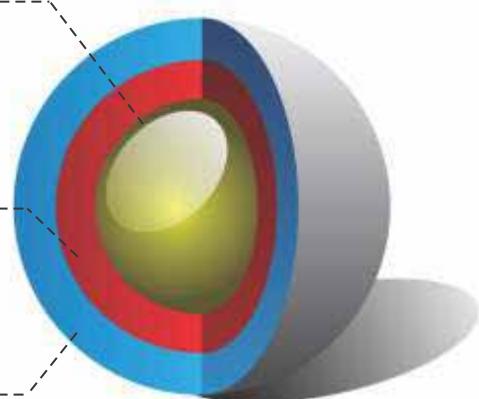

The following standards define areas according to the presence of gas or dust in the atmosphere:

IEC/EN 60079-10-1 Gas

IEC/EN 60079-10-2 Dust

Zone 0 (Gas) / 20 (Dust)

Continuously  
Permanent presence of  
explosive atmosphere

Zone 1 (Gas) / 21 (Dust)

Occasionally  
Incidental presence of explosive  
atmosphere during normal duty

Zone 2 (Gas) / 22 (Dust)

Abnormal condition  
Presence of explosive atmosphere  
only by accident, but not during  
normal duty

### Type of Enclosures

Ex 'd'

Flameproof enclosure in accordance with IEC 60079-1

Machines constructed to contain an internal explosion and prevent the transmission of flame to the external Atmosphere.

Operating temperature is such that it cannot ignite any surrounding gases.

Applicable zones: Zone 1 and 2

Ex 'n'

Non-sparking in accordance with IEC 60079-15

Machines constructed to contain an internal explosion and prevent the transmission of flame to the external Atmosphere.

Operating temperature is such that it cannot ignite any surrounding gases.

Applicable zones: Zone 1 and 2

Ex 'e'

Increased safety in accordance with IEC 60079-7

Machines that do not emit dangerous sparks or temperatures when starting or during normal operation. Special additional safety measures are taken.

Applicable zones: Zone 1 and 2

### Hazardous Areas

According to IEC 60079-10 standard, Explosive Atmosphere is a "mixture with air, under atmospheric conditions, of flammable substances in the form of gas, vapors, dust, fibers, or flyings which, after ignition, permits self-sustaining propagation". Hazardous Area is "an area in which an explosive atmosphere is or may be expected to be present, in quantities such as to require special precautions for the construction, installation and use of equipment". For this reason, motors with explosion proof protection are built in such a way to not allow the explosion in the hazardous areas, where they are installed. Explosions may occur either due to the transfer of flames or overheating. The hazardous areas are classified per zones, groups and temperature classes, according to the International Electrotechnical Commission (IEC) and National Electrical Committee (NEC).

### Temperature classification

A mixture of hazardous gases and air may be ignited by coming into contact with a hot surface. The conditions under which a hot surface will ignite a gas depend on surface area, temperature, and the concentration of the gas. The same can be said about combustible dusts. The T code of a product denotes the maximum surface temperature that a given product will not exceed under a specified ambient temperature. For example, a product with a T code of T3 means that its maximum surface temperature will not exceed 200°C provided it is operated in a ambient temperature defined by the manufacturer.

Temp. Class as per IS:3681 and IEC 79-7	Ignition Temperature -°C	
	Above	Upto and including
T1	450	-
T2	300	450
T3	200	300
T4	135	200
T5	100	135
T6	85	100

If a hazardous is present the equipment used with in the installation must be given an appropriate T classification in order to maintain the integrity. If that hazardous is, say, hydrogen, then all equipment used must meet the T6 rating. This means that all equipment used must not have a surface temperature of greater than 85°C. Any equipment used that can generate a hotter surface temperature of greater than 85°C must not be used as this will then increase the likelihood of an explosion by igniting the hydrogen in the atmosphere.

### Classification of hazardous gases :

Hazardous gases have been classified in IS:2148, VDE 0171 & 5572 (Pt 1) and are associated only with flame proof enclosures. These gases are listed in Table 3.

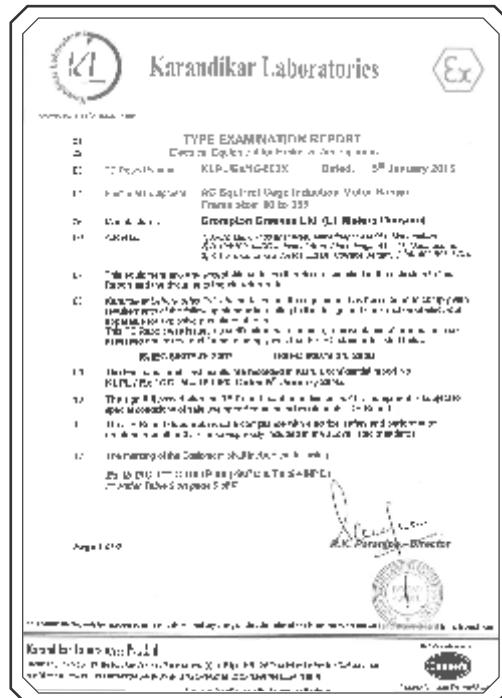

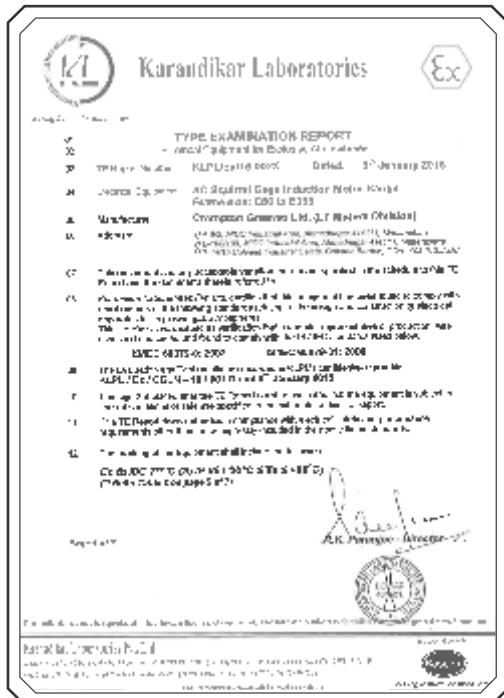

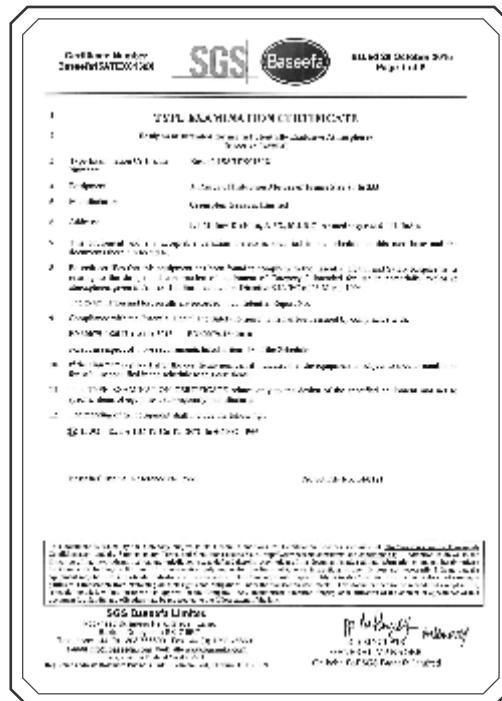

Note : Flame proof motors are offered suitable for Gas Groups I, IIA & IIB only. For gases not mentioned, please refer the relevant Indian Standards.

Gas Group	Gas or Vapour	Temp. Class.
I	Methane (Firedamp)	T1
II A	Ammonia	T1
	Industrial methane*	T1
	Carbon monoxide	T1
	Propane	T1
	Butane	T2
	Benzene	T1
	Cyclohexane	T2
	Acetone	T1
	Ethyl acetate	T1
	Amyl acetate	T2
	Methanol	T1
	Ethanol	T2
	n-Butanol	T2
II B	1 , 3 – Butadiene	T2
	Ethylene	T2
	Diethyl ether	T4
	Ethylene oxide	T2
	Coke-oven gas	T1
II C	Hydrogen	T1

FL = Full Load; FLC = Full Load Current; FLT = Full Load Torque  
SGT. T = Starting Torque; SGT. C = Starting Current

\* Tolerances are applicable as per IEC 60034-1 : 2004  
Full load current indicated are given for respective voltage designs

## WIDE RANGE OF APPLICATIONS ACROSS INDUSTRIES

Apex series LV AC flame proof motors are designed to work in different hazardous areas ensuring the high safety and with premium efficiency.

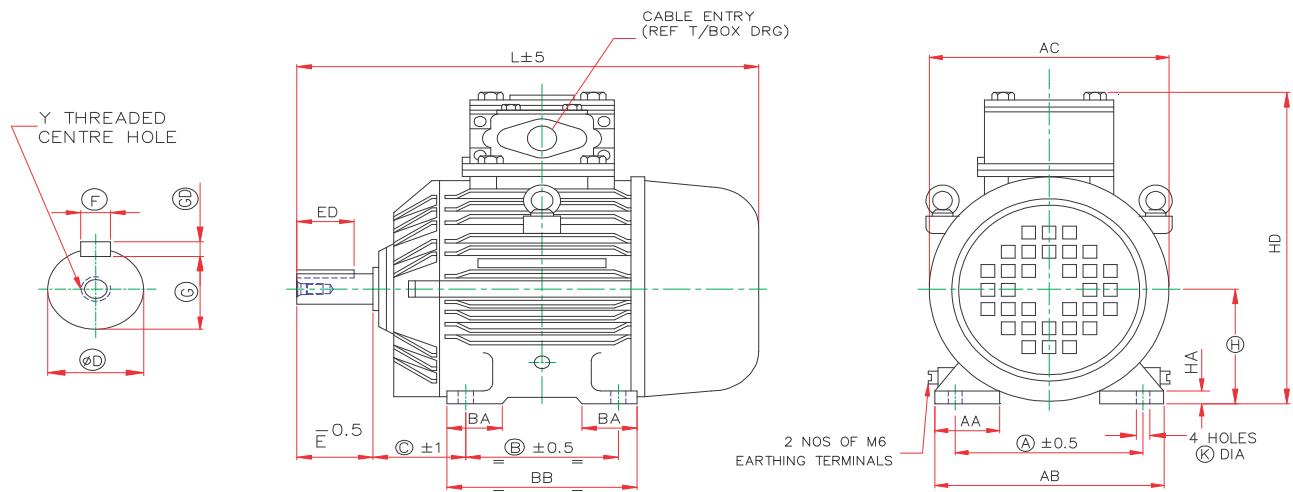

### CG Ex'e' and Ex'n' Motors

Range	
Output	0.18kW to 325 kW
Frames	ND80 to ND355
Poles	2,4,6

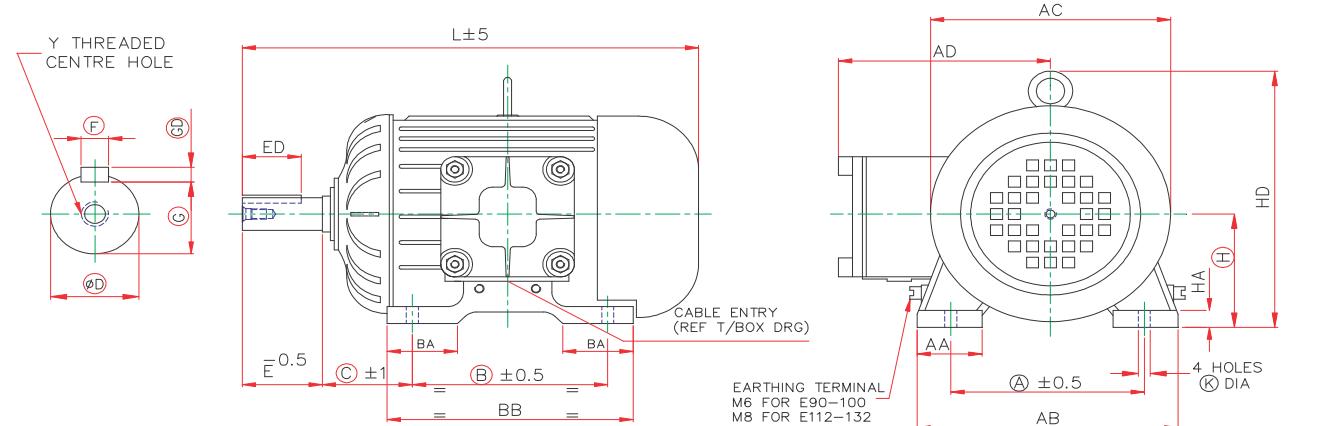

Specification			
	Standard	Product	Option
Frame sizes	ND80 to ND355		-
Enclosure	IP55		IP66
Zone	2		
Gas group	IIA IIB IIC		
Mounting	B3		Other per request
Voltage	Upto 3 kW	415V Δ	other on request
	Above 3kW	415V △	
Frequency	50Hz		60HZ*
Cooling	IC411		
Insulation	Class F		Class H
Ambient Temperature	-20°C to 45°C		Standard output at different Ambient
			45°C 50°C 55°C 60°C
			100% 92% 85% 78%
Altitude	<1000		
Approvals	PESO

### Flameproof Motors with Brake

The installation of electric motors where flammable products are continuously handled, processed or storage must comply with the most demanding safety standards in order to guarantee life protection, machines and environment. Following to highest safety standards, CG Flame proof motors integrate the high performance of the brakes. An effective solution for equipment where fast safety stops are required, as well as precise positioning with safety in hazardous areas such as Zone 1 and Zone 2.

#### Standard Features

- Output: 0.37 up to 37 kW
- Number of Poles: 2, 4, 6 and 8
- Frequency: 50 Hz
- Frames: E90 to E160

#### Applications

Pumps, compressors, fans, blowers, conveyors and other sever duty applications in explosive atmospheres classified as Zones 1 and 2, gas groups IIA or IIB or IIC

Features	Benefits
High performance braking system	Ensures quick and safe stops and accurate load positioning and requires low maintenance
Modern flame retention system with robust frame, end shields and T-box	Avoid flame propagation from inside the motor to the external side, guaranteeing safety life protection, machines and environment
Additional nameplate	Easy identification of the motors in the factory and traceability
Painting Plan for Severe Environments	Special for industrial severe environments, sheltered or not, which may contain
Protection	Motor suitable to operate in hazardous locations classified as Zones 1 and 2

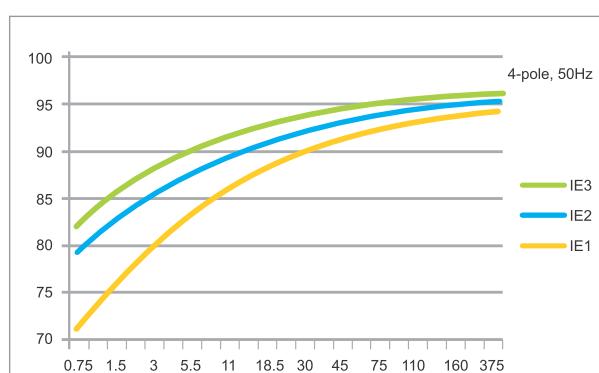

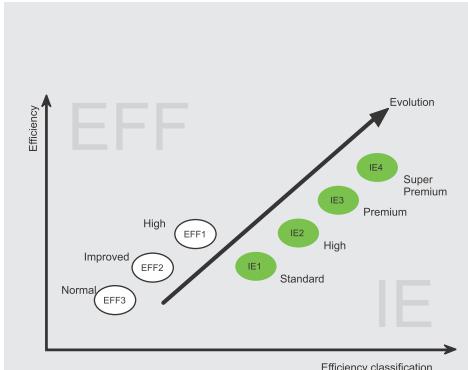

# ENERGY SAVING

## Minimum efficiency values defined in IEC 60034-30:2008 & Annual energy savings

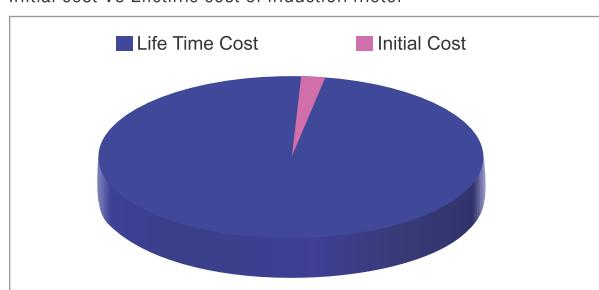

kW	IE1			IE2			IE3			IE2 Vs IE1 saving in kWh			IE3 Vs IE2 Saving in kWh			IE3 Vs IE1 Saving in kWh

\* Annual energy savings are calculated for 8760 hrs/ annum

### Efficiency class comparison

### Initial cost Vs Lifetime cost of induction motor

### Example:

Energy savings by replacing 11kW 2 pole IE1 motor to IE3 motor:

$$\begin{aligned} \text{Annual Savings} &= \text{No. of units energy saved} \times R \\ &= 4342 \times 5 \text{ ₹} \\ &= 21710 \text{ ₹} \end{aligned}$$

\*R= Energy Tariff in local currency

$$\text{Payback( months)} = \frac{\text{Cost of energy efficient motor- cost of standard motor}}{\text{Annual energy savings}} \times 12$$

# Eco Friendly Packaging Scheme

Aware & concerned about the environmental issues, CG has developed special packing Case in fabrication.

With this initiative more than
